# OPERATION

When the **optional** Solid State Drive (SSD) Adapter is used in conjunction with the **CRUNCH 250**, it destroys SSD's to a high security level. Specially profiled plates crush the solid state media from the top and bottom, causing rippling, which destroys the individual memory chips.

The SSD Adapter simply slots into the **CRUNCH 250**'s destruction chamber and locks in place.

Place SSD's into the adapter and press the green **Destroy** button to commence the cycle.

The destruction cycle takes just 9 seconds, after which, simply pull the adapter eject handle to extract the destroyed SSD.

Card SSD's, flash drives and memory cards up to 2.5 x 4 inch (64x100mm) can also be destroyed by placing them in the SSD Adapter across the destruction bars.
